

Australian Bureau of Statistics

6291.0.55.003 - Labour Force, Australia, Detailed, Quarterly, Nov 2016

Previous ISSUE Released at 11:30 AM (CANBERRA TIME) 22/12/2016

Summary

Main Features

Data from the monthly Labour Force Survey are released in two stages. The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) are part of the second release, and include detailed data not contained in the Labour Force, Australia (cat. no. 6202.0) product set, which is released one week earlier.

The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) is released monthly. Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) includes data only collected in February, May, August and November (including industry and occupation).

Since these products are based on the same data as the Labour Force, Australia (cat. no. 6202.0) publication, the 6202.0 Labour Force, Australia Explanatory Notes are relevant to both releases.

For the first time, the November 2016 issue of Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) includes detailed quarterly labour force data in pivot table format, in addition to the existing suite of SuperTable data cube outputs. SuperTable data cube outputs for Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) will be discontinued after the August 2017 issue.

Insights from the Original Data

INSIGHTS FROM THE ORIGINAL DATA

SAMPLE COMPOSITION

The Labour Force Survey sample can be thought of as comprising eight sub-samples (or rotation groups), with each sub-sample remaining in the survey for eight months, and one rotation group "rotating out" each month and being replaced by a new group "rotating in". This sample rotation is important in ensuring that seven-eighths of the sample are common from one month to the next, to ensure that changes in the estimates reflect real changes in the labour market, rather than the sample. In addition, the incoming rotation group is generally selected from the same geographic areas as the outgoing one, as part of a representative sampling approach.

When considering movements in the original estimates, it is possible to decompose the sample into three components:

- the matched common sample (survey respondents who responded in both October and November);
- the unmatched common sample (respondents in November but who did not respond in October, or vice versa); and
- the incoming rotation group (who replaced respondents who rotated out in October).

The detailed decomposition of each of these movements is included in the data cube 'Insights From the Original Data'.

In considering the three components of the sample, it is important to remember that the matched common sample describes the change observed for the same respondents October and November, while the other two components reflect differences between the aggregate labour force status of different groups of people.

While the rotation groups are designed to be representative of the population, the outgoing and incoming rotation groups will almost always have somewhat different characteristics, as a result of the groups representing a sample of different households and people. The design of the survey, including the weighting and estimation processes, ensures that these differences are generally relatively minor and seeks to ensure that differences in characteristics of rotation groups do not affect the representativeness of the survey and its estimates. Monthly estimates are always designed to be representative of their respective months, regardless of the relative contribution of the three components of the sample.

INCOMING ROTATION GROUP

In original terms, the incoming rotation group in November 2016 had a higher employment to population ratio than the group it replaced (60.2 per cent in October 2016, up to 60.8 per cent in November 2016), and was slightly lower than the ratio for the entire sample (61.1 per cent). Its full-time employment to population ratio was higher than the group it replaced, up from 40.1 per cent in October 2016 to 42.7 per cent in November 2016.

Its unemployment rate was slightly above that of the sample as a whole, while its participation rate was slightly lower.

The incoming rotation group also had a reduced share of the population (12.5 per cent, down from 13.2 per cent for the group it replaced). This population share is now around the average share for eight rotation groups.

OUTGOING ROTATION GROUP

In looking ahead to the December 2016 estimates, the outgoing rotation group in November 2016, which will be replaced by a new incoming rotation group in December 2016, had a slightly higher employment to population ratio (61.5 per cent in November 2016) compared to the sample as a whole (61.1 per cent in November 2016). It also had a higher full-time to employment ratio (41.9 per cent), compared to the entire sample (41.7 per cent).

In original terms, the unemployment rate for the outgoing rotation group in November 2016 was 5.7 per cent, which was higher than the 5.4 per cent for the whole sample. The

participation rate for the outgoing rotation group in November 2016 was 65.2 per cent, also higher than the rate for the whole sample (64.6 per cent).

OTHER OBSERVATIONS - QUEENSLAND

The relatively large increase in employment in Queensland in November was seen across a number of rotation groups, including the outgoing-incoming rotation group change in November. This points to general sampling variability across the common sample for Queensland, and also follows three months of decreases in employment.

THE IMPORTANCE OF TREND DATA

As the gross flows and rotation group data are presented in original terms they are not directly comparable to the seasonally adjusted and trend data discussed elsewhere in the commentary, and are included to provide additional information for the original data. Since the original data are unadjusted, they have a considerable level of inherent sampling variability, which is specifically adjusted for in the trend series. The trend data provide the best measure of the underlying behaviour of the labour market and are the focus of the commentary in this publication.

Labour Force Pivot Tables

LABOUR FORCE PIVOT TABLES

Commencing with the August 2016 issue of Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and the November 2016 issue of Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003), the ABS is now publishing detailed Labour Force data in pivot table format, in addition to the existing suite of SuperTable data cube outputs.

Pivot tables will increase the accessibility of Labour Force data, as well as provide a long term replacement for the unsupported Summary Record Database (SRD) format. The pivot table products reflect the design and utility of the existing Summary Record Database (SRD) data cubes as closely as possible. In addition, the inclusion of a comma separated variable (CSV) source worksheet in each pivot table is expected to be of particular interest to people who undertake statistical analysis using a range of software.

The ABS will continue to release the SRD data cubes until July 2017 for monthly data and August 2017 for quarterly data, to allow for a transition to pivot tables, after which point the ABS intends to cease publishing Labour Force SRD data cubes.

A similar transition for the GM1 data cube in Labour Force, Australia (cat. no. 6202.0) will also commence, most likely in 2017.

Article Archive

This section provides an archive of articles and analysis published in Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) and Labour Force, Australia (cat. no. 6202.0), promoting the effective use of labour force statistics. Articles are sorted by publication date.

Articles on labour related topics are also available in Australian Labour Market Statistics (cat. no. 6105.0) and Australian Social Trends (cat. no. 4102.0).

About this Release

A range of Excel spreadsheets, pivot tables, and SuperTABLE datacubes. SuperTABLE data cubes will be discontinued after the July 2017 release. The monthly spreadsheets contain broad level data covering all the major items of the Labour Force Survey in time series format, including seasonally adjusted and trend estimates. The monthly datacubes and pivot tables contain more detailed and cross classified original data than the spreadsheets.

History of Changes

This document was added or updated on 23/12/2016.

23/02/2017

Pivot tables EQ05, EQ06, EQ07a, EQ07b, EQ08, EQ09, EQ13, RQ1 and RQ2, and time series spreadsheets 7, 12, 19 and 28 have been updated to include previously missing 'not further defined' categories and the associated data, which were not present when originally published on 22 December 2016. No other changes have been made

23/12/2016

The ABS has identified an issue with missing detailed 'not further defined' categories in the newly released EQ05, EQ06, EQ07a, EQ07b, EQ08, EQ09, EQ13, RQ1 and RQ2 pivot tables. These tables have been temporarily removed and will be republished as soon as they are corrected. No other changes have been made.

In the interim, the correct data is available from the related established Excel time series spreadsheets and SuperTable datacubes.

Explanatory Notes

Explanatory Notes

Data from the monthly Labour Force Survey are released in two stages. The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) are part of the second release, and include detailed data not contained in the Labour Force, Australia (cat. no. 6202.0) product set, which is released one week earlier.

The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) is released monthly. Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) includes data only collected in February, May, August and November (including industry and occupation).

Since these products are based on the same data as the Labour Force, Australia (cat. no. 6202.0) publication, the 6202.0 Labour Force, Australia Explanatory Notes are relevant to both releases.

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

For a better level estimate of public sector employment, including by level of government, the ABS recommends referring to the annual Employment and Earnings, Public Sector,

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

For a better level estimate of public sector employment, including by level of government, the ABS recommends referring to the annual Employment and Earnings, Public Sector, Australia (cat. no. 6248.0.55.002).

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

For a better level estimate of public sector employment, including by level of government, the ABS recommends referring to the annual Employment and Earnings, Public Sector, Australia (cat. no. 6248.0.55.002).

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

For a better level estimate of public sector employment, including by level of government, the ABS recommends referring to the annual Employment and Earnings, Public Sector, Australia (cat. no. 6248.0.55.002).

Standard Errors

Estimates from the Labour Force Survey (LFS) are based on information collected from people in a sample of dwellings, rather than the entire population. Hence the estimates produced may differ from those that would have been produced if the entire population had been included in the survey. The most common measure of the likely difference (or 'sampling error') is the **standard error** (SE).

The ABS considers that estimates with a relative standard error of 25% or more may be subject to sampling variability too high for most practical purposes.

To indicate those cells in spreadsheets with a relative standard error of 25% or more, annotations have been applied prior to dissemination.

In addition, the tables below have been supplied to show estimates at which the relative standard error is 25%. Estimates of the size indicated in the tables, or smaller, are considered to be subject to sampling variability too high for most practical purposes.

Due to the January 2011 flooding in Queensland the relative standard errors for January will be higher than normal in some regions, therefore for Queensland the estimates at which the

relative standard error is 25% will be higher than they appear in the tables below. However from February, the data returns to normal.

The RSEs for July 2013 (50% old sample, 50% new sample) and onwards will be subject to revisions in the future, as more information is known about the new sample after it has been introduced.

Additional information on how standard errors for LFS estimates are produced is available in Labour Force Survey Standard Errors, Data Cube (cat. no. 6298.0.55.001).

Quality Declaration - Summary

QUALITY DECLARATION - SUMMARY

INSTITUTIONAL ENVIRONMENT

Labour Force statistics are compiled from the Labour Force Survey which is conducted each month throughout Australia as part of the Australian Bureau of Statistics (ABS) household survey program. For information on the institutional environment of the Australian Bureau of Statistics (ABS), including the legislative obligations of the ABS, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.

RELEVANCE

The Labour Force Survey provides monthly information about the labour market activity of Australia's resident civilian population aged 15 years and over. The Labour Force Survey is designed to primarily provide estimates of employment and unemployment for the whole of Australia and, secondarily, for each state and territory.

TIMELINESS

The Labour Force Survey enumeration begins on the Sunday between the 5th and 11th of the month, except for the Christmas and New Year holiday period. In December enumerations starts between the 3rd and 9th (4 weeks after November enumeration begins). In January enumeration starts between the 7th and 13th (5 weeks after December enumeration begins).

Key estimates from the Labour Force Survey are published in two stages. The first, *Labour Force, Australia* (cat. no. 6202.0), is released 39 days after the commencement of enumeration for the month, with the exception of estimates for December which are published 46 days after the commencement of enumeration.

The second stage includes detailed data that were not part of the first stage and are published in *Labour Force, Australia, Detailed - Electronic Delivery* (cat. no. 6291.0.55.001) and *Labour Force, Australia, Detailed, Quarterly* (cat. no. 6291.0.55.003). The second stage

is released 7 days after the first stage.

ACCURACY

The Labour Force Survey is based on a sample of private dwellings (approximately 26,000 houses, flats etc) and non-private dwellings, such as hotels and motels. The sample covers about 0.32% of the Australian civilian population aged 15 years or over. The Labour Force Survey is designed primarily to provide estimates of key labour force statistics for the whole of Australia and, secondarily, for each state and territory.

Two types of error are possible in an estimate based on a sample survey: non-sampling error and sampling error.

Non-sampling error arises from inaccuracies in collecting, recording and processing the data. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures. Non-sampling error also arises because information cannot be obtained from all persons selected in the survey. The Labour Force Survey receives a high level of cooperation, with an average response rate for the last year being 93%.

Sampling error occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors.

Standard errors of key estimates and movements since the previous month are available in *Labour Force, Australia* (cat. no. 6202.0). The standard error of other estimates and movements may be calculated by using the spreadsheet contained in *Labour Force Survey Standard Errors, Data Cube* (cat. no. 6298.0.55.001).

COHERENCE

The ABS has been conducting the Labour Force Survey each month since February 1978. While seeking to provide a high degree of consistency and comparability over time by minimising changes to the survey, sound survey practice requires careful and continuing maintenance and development to maintain the integrity of the data and the efficiency of the collection.

The changes which have been made to the Labour Force Survey have included changes in sampling methods, estimation methods, concepts, data item definitions, classifications, and time series analysis techniques. In introducing these changes the ABS has generally revised previous estimates to ensure consistency and coherence with current estimates. For a full list of changes made to the Labour Force Survey see Chapter 20 in *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001).

INTERPRETABILITY

The ABS has been conducting the Labour Force Survey each month since February 1978. While seeking to provide a high degree of consistency and comparability over time by

minimising changes to the survey, sound survey practice requires careful and continuing maintenance and development to maintain the integrity of the data and the efficiency of the collection.

The changes which have been made to the Labour Force Survey have included changes in sampling methods, estimation methods, concepts, data item definitions, classifications, and time series analysis techniques. In introducing these changes the ABS has generally revised previous estimates to ensure consistency and coherence with current estimates. For a full list of changes made to the Labour Force Survey see Chapter 20 in *Labour Statistics: Concepts, Sources and Methods* (cat. no. 6102.0.55.001).
